DETAILED ACTION

Allowable Subject Matter

1. Claims 2-8 are allowed. The drawings filed 9-9-03 are acceptable.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

The present invention includes independent claim 2. Claim 2 recites a method for fabricating a quantum dot functional structure.

Yoshida is considered the closest prior art. Yoshida teaches generating fine particles, classifying the particles generated according to a desired particle diameter in the gas, exhausting the gas for transporting the fine particles after classifying, collecting the classified particles onto a substrate and generating a transport medium at the same time, and depositing the particles and transparent medium onto the substrate at the same time.

Yoshida does not disclose the claimed combination including:

depositing said classified fine particles and said transparent medium onto said substrate at the same time;

wherein in said fine particles classifying step, charged ultra-fine particles are

classified in a classifying region by making use of electrical mobility being dependent on a particle diameter of charged particles upon application of an electrostatic field thereto in a viscous fluid, said classifying region employing a space defined between two concentric disks, spaced apart from each other and arranged parallel to each other; and said charged ultra-fine particles are classified two or more multi-stages in which three or more of said concentric disks are arranged to thereby constitute said classifying region.

For these reasons claims 2 is deemed to be allowable over the prior art of record, and claims 3-8 are allowable by dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
